

Requirement

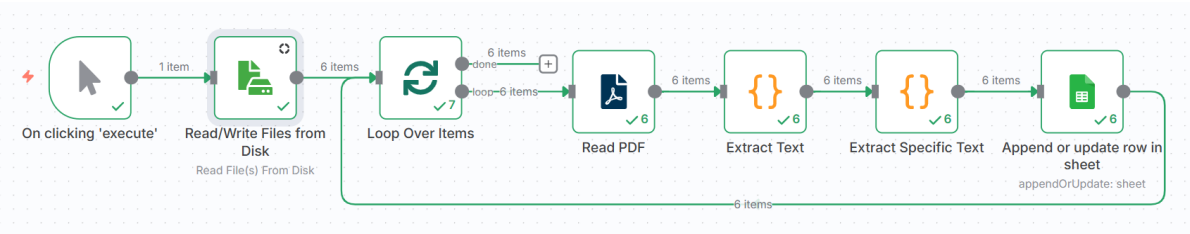

To streamline our workflow, we want to develop an automated system that reads CAD drawings stored as PDFs, pulls out key information, and outputs the results to Excel format.

Using **n8n** localhost as an automation tool, we have the flow below:

The output from its updated Excel is as shown.

In the above, those pdf files reside in the local directory in personal desktop.

In the below section, the pdf files are extracted from Microsoft OneDrive, which needs **Cloud n8n**.

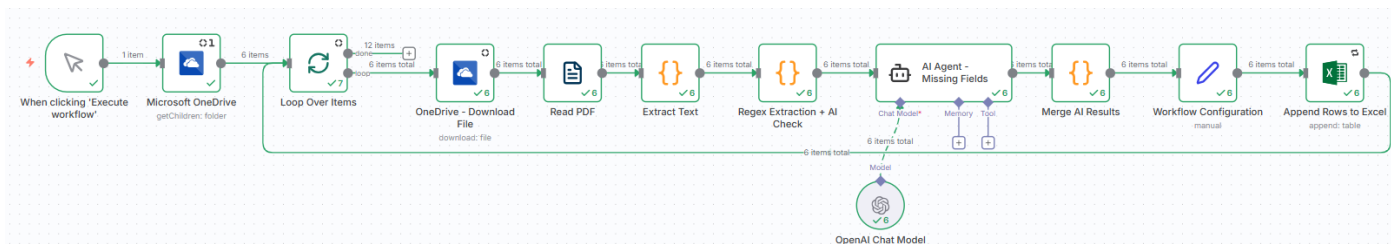

Below illustrates the updating of Excel in Microsoft OneDrive. The 6 pdf files are extracted from Microsoft OneDrive too.

My files > n8n
